

FdSc Marine Conservation

There has never been a more pressing need for trained marine biologists who understand the threats facing life in the oceans. This programme allows you to gain an understanding of the science underlying marine conservation; whilst our location on the beautiful wild coast of north Cornwall enables you to study a wide variety of aquatic habitats and marine wildlife at first hand. Designed in close consultation with the marine industry, this exciting and vibrant programme is highly relevant if you would like a career in the expanding field of marine biology and conservation.

The first year will give you a firm grounding in aquatic ecology, marine and biological science, as well as developing practical survey skills. In the second year there are more specialised modules covering topics such as fish ecology and marine invertebrates.

There is a large element of work-related learning integrated within the programme and you will have the opportunity to talk to many experts in the field and visit professional institutions; we have strong links with commercial partners Blue Reef Aquarium, the National Lobster Hatchery and Cornwall Wildlife Trust.

Marine Conservation in Practice develops skills in stakeholder engagement and outreach activities. It also incorporates the requirement to gain 100 hours of relevant work-based experience.

Possible Progression (subject to availability)

- BSc (Hons) Applied Zoology (top-up) at Newquay
- BSc (Hons) Applied Marine Zoology (top-up) at Newquay
- BSc (Hons) Environmental Resource Management (final year) at Newquay

Possible Careers

- Marine Biologist
- Marine Education Officer
- Fisheries Officer
- Marine Technician
- Wildlife Guide
